Supplementary Table 4. Relative abundances of Antibiotic Resistance Determinant (ARD) Index per sample. Samples were grouped according to their location (Open Sound, Nearshore, WWTP).

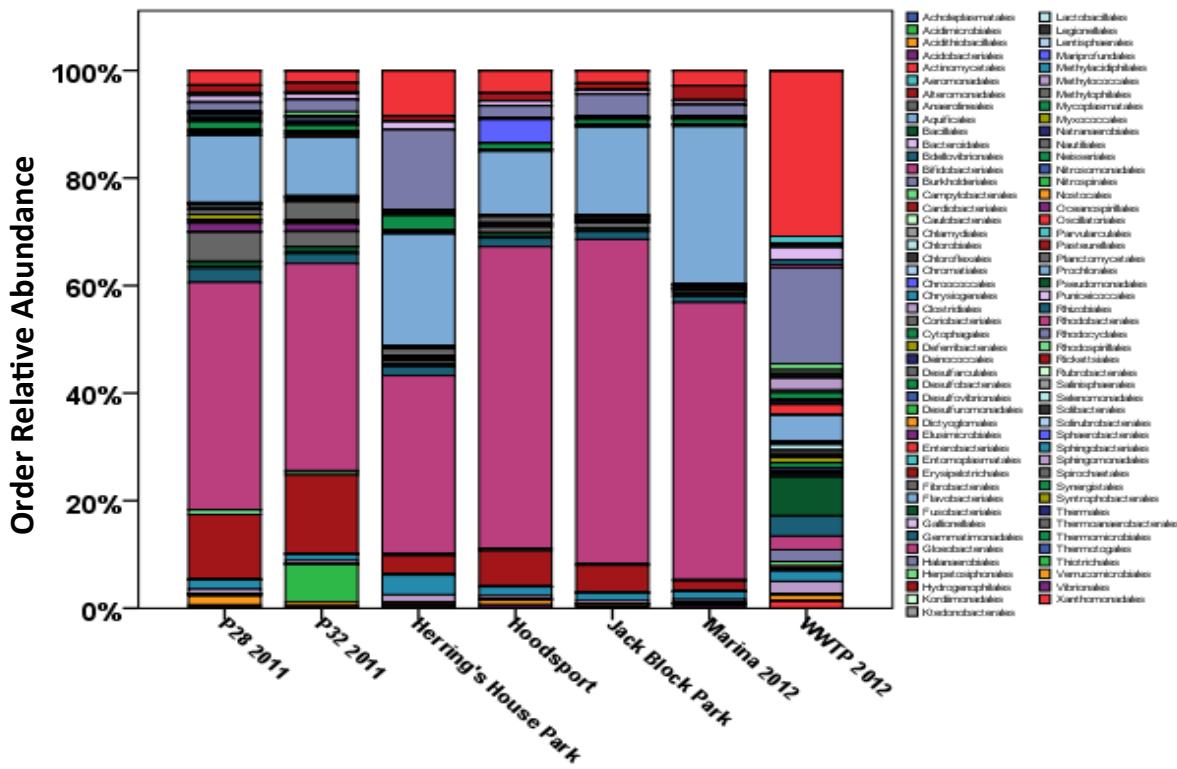

## Supplementary Figures

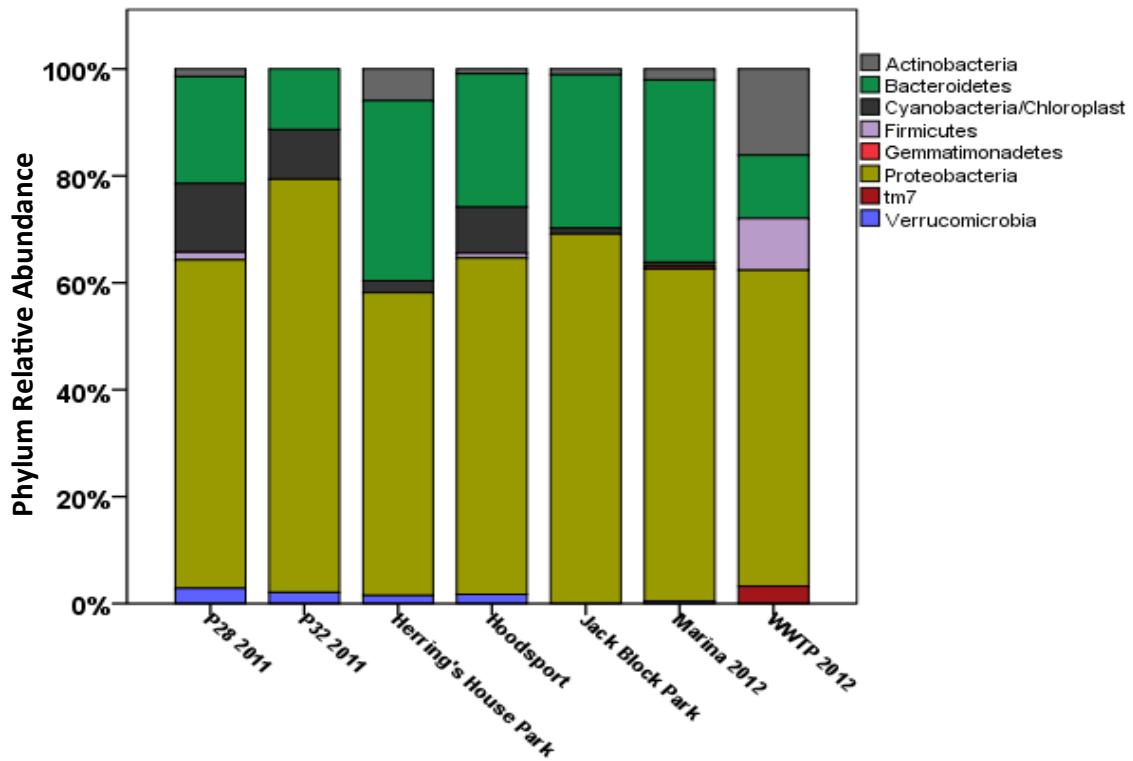

Supplementary Figure 1. Rarefaction Curves (Species Accumulation Curves) of 2012 Samples using total percentage of reads and annotated species richness.

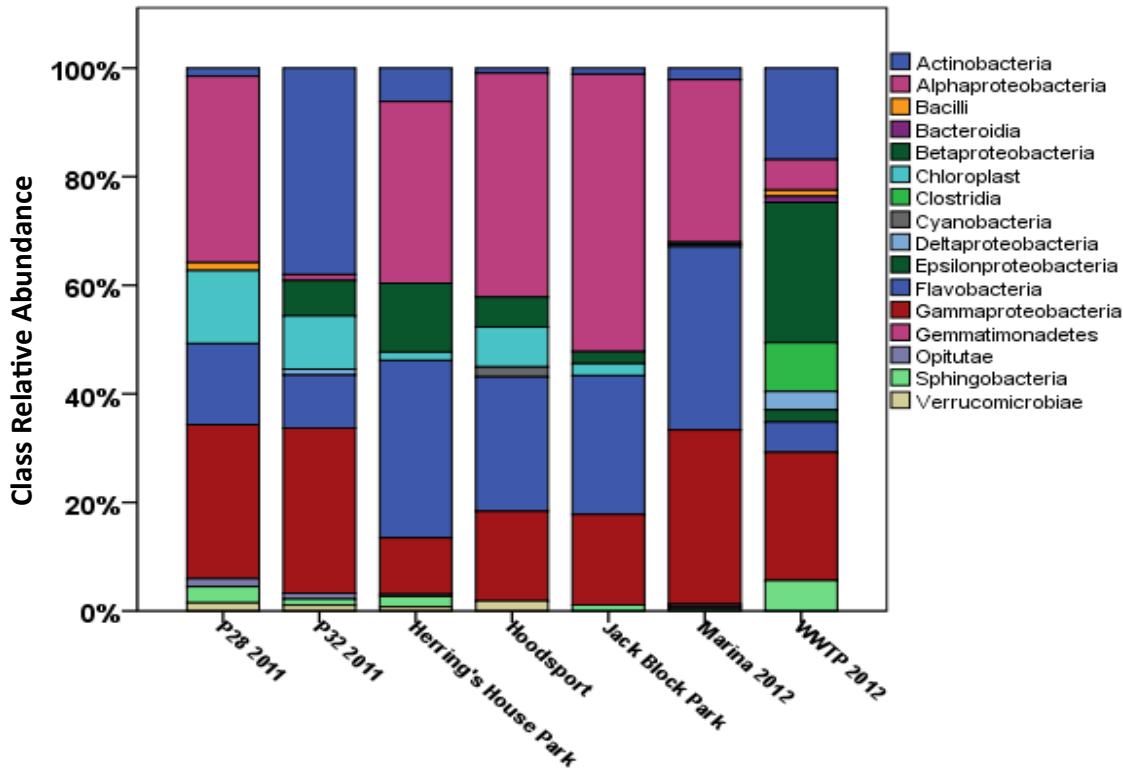

Supplementary Figure 2. Class Distribution of 2012 Samples with LCA annotation using the MG-RAST Pipeline. Class abundance counts were normalized to the total number of Class abundance counts per sample.

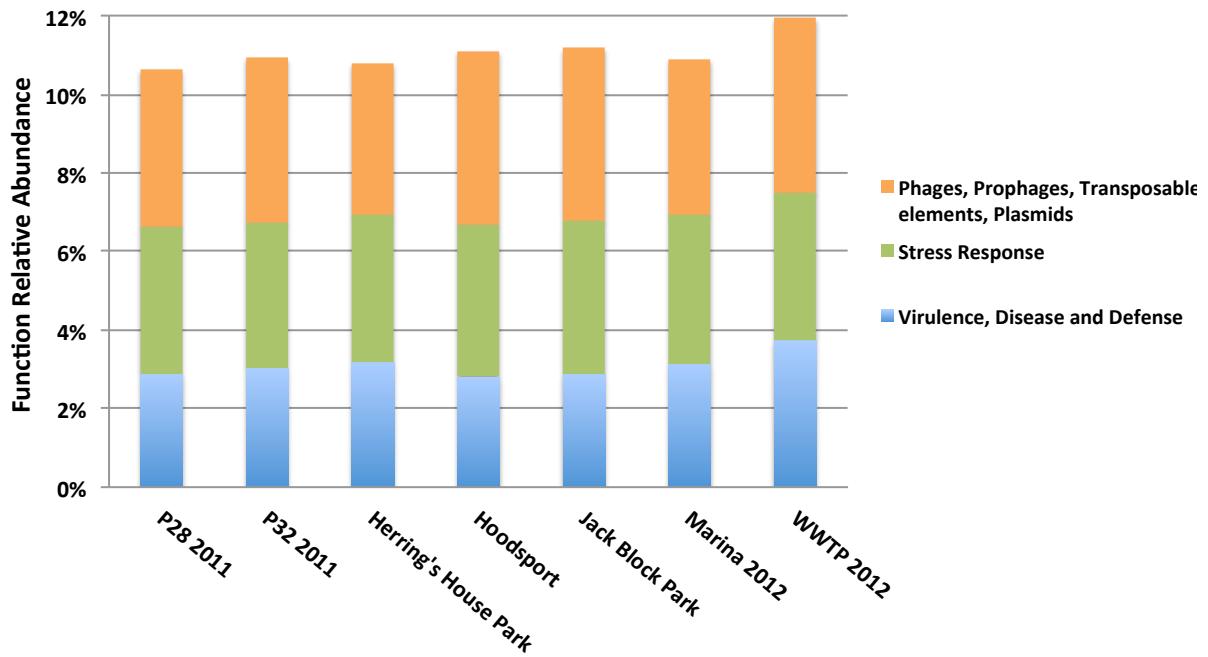

Supplementary Figure 3. Order Distribution of 2012 Samples with LCA annotation using the MG-RAST Pipeline. Order abundance counts were normalized to the total number of Order abundance counts per sample.

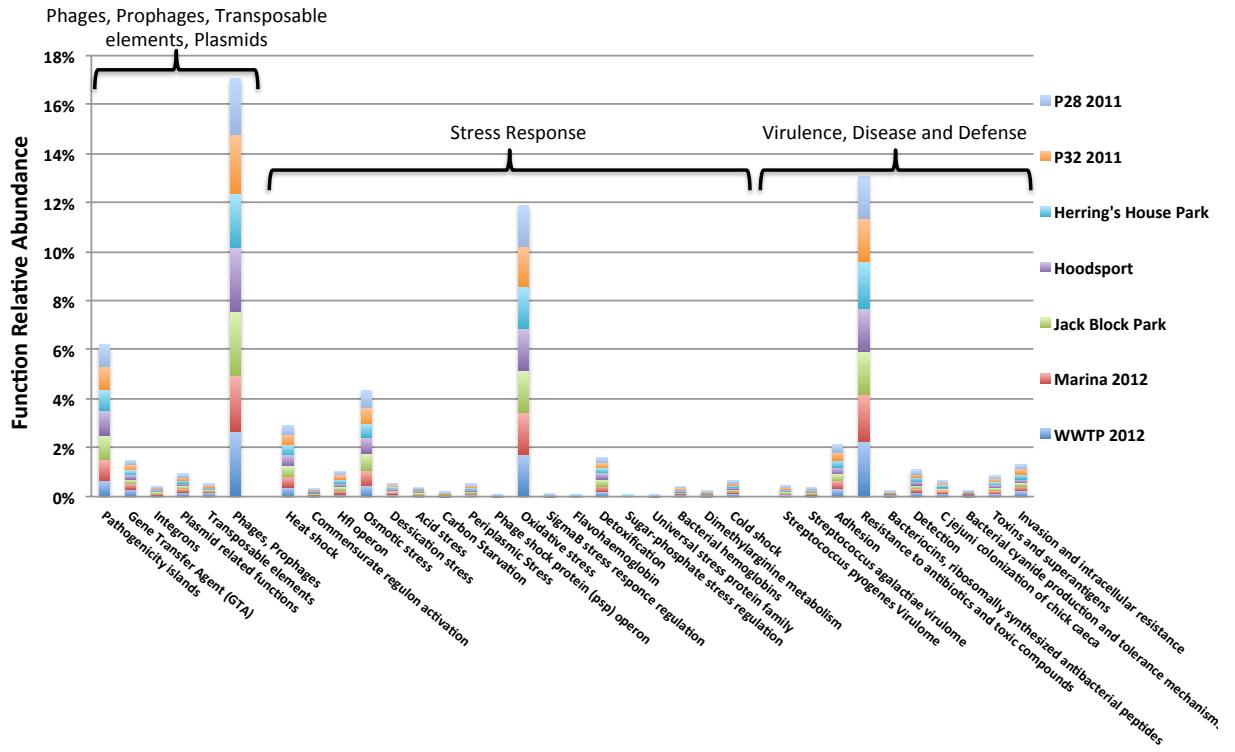

Supplementary Figure 4. 16S rRNA Gene Phylum Distribution. Phylum Distribution of 2012 Samples using the 16S rRNA Gene annotation from the Ribosomal Database Project Classifier. Phylum abundance counts were normalized to the total number of Phylum abundance counts per sample.

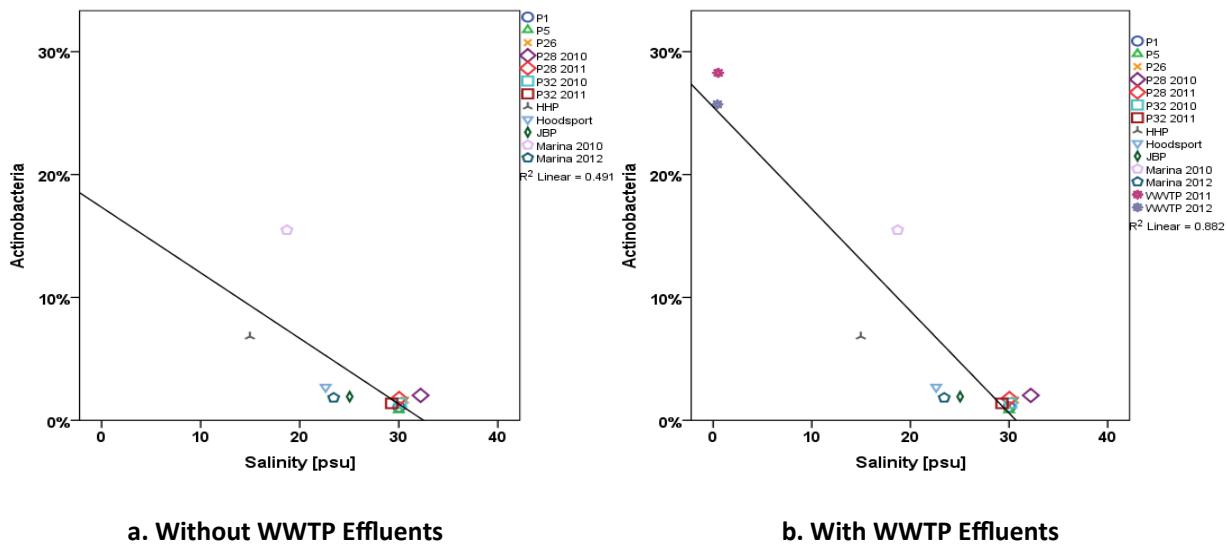

Supplementary Figure 5. 16S rRNA Gene Class Distribution. Class Distribution of 2012 Samples using the 16S rRNA Gene annotations from the Ribosomal Database Project Classifier. Class abundance counts were normalized to the total number of Class abundance counts per sample.

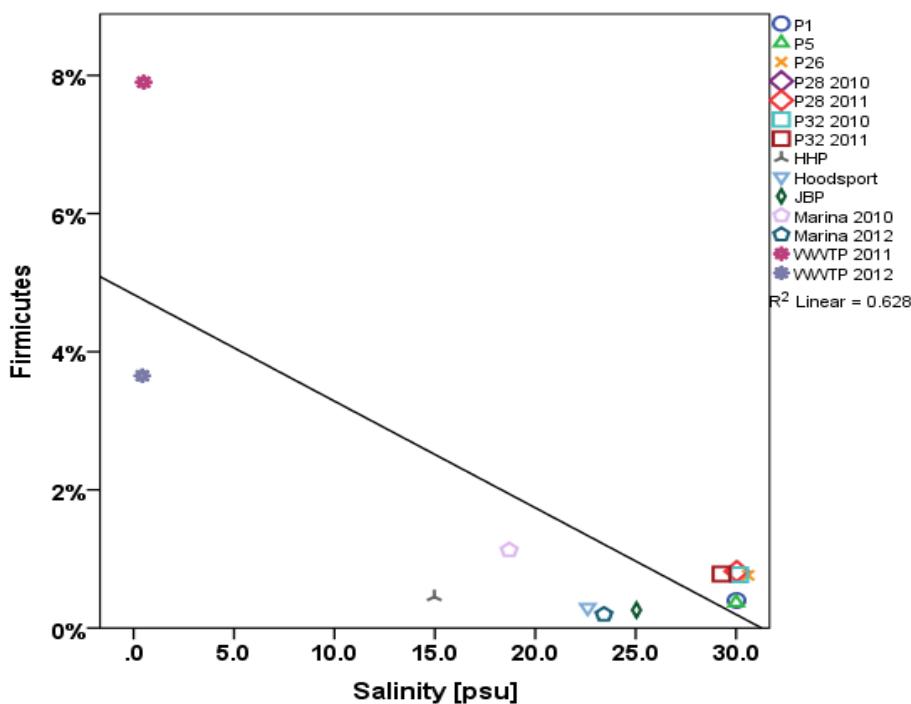

Supplementary Figure 6. Public Health Relevant Functional Distribution of 2012 Samples with SEED subsystems Level 1 annotation using the MG-RAST Pipeline. Functional abundance counts were normalized to the total number of Level 1 abundance counts per sample.

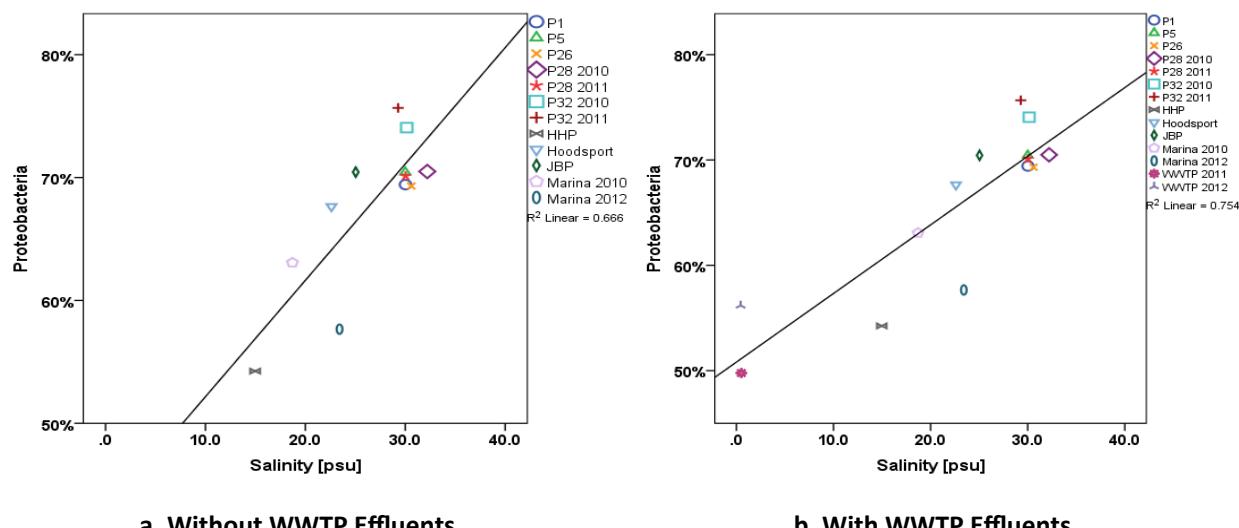

Supplementary Figure 7. Functional Drivers of Public Health Relevant Functions of 2012 Samples with SEED subsystems Level 2 annotation using the MG-RAST Pipeline. Functional abundance counts were normalized to the total number of Level 2 abundance counts per sample.

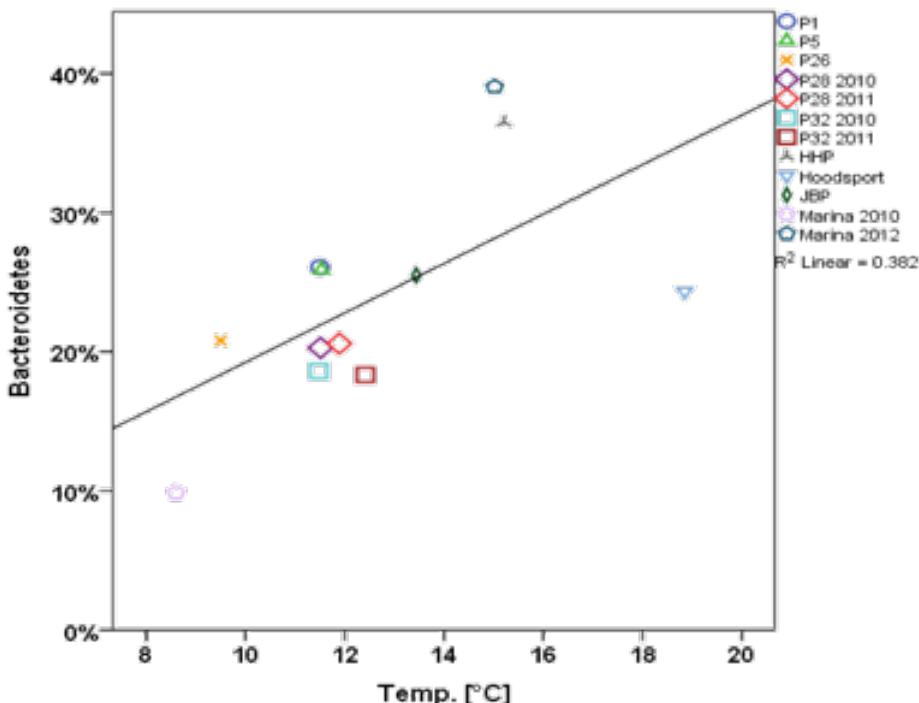

Supplementary Figure 8. Actionobacteria Abundance versus the Salinity. Relationship between the relative abundance of Actionobacteria and Salinity. A statistically significant negative correlation was observed between the relative abundances of Actionobacteria and Salinity in a. all Puget Sound samples not including WWTP effluents and b. All Puget Sound samples including WWTP effluents.

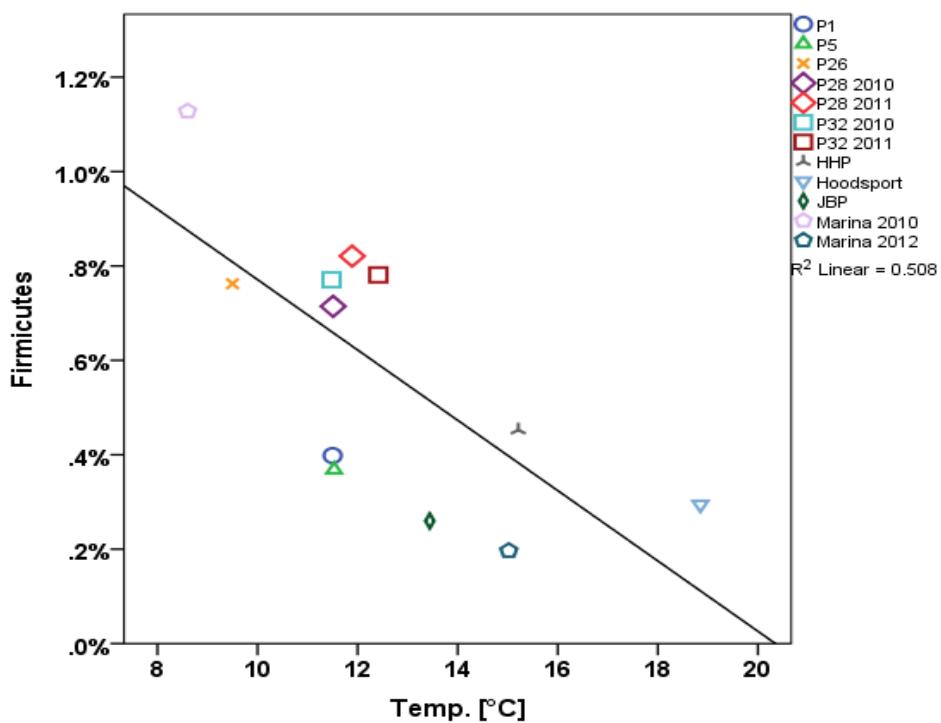

Supplementary Figure 9. Relationship between the relative abundance of Firmicutes and Salinity. A statistically significant negative correlation was observed between the relative abundances of Firmicutes and Salinity in all Puget Sound samples including the WWTP effluents.

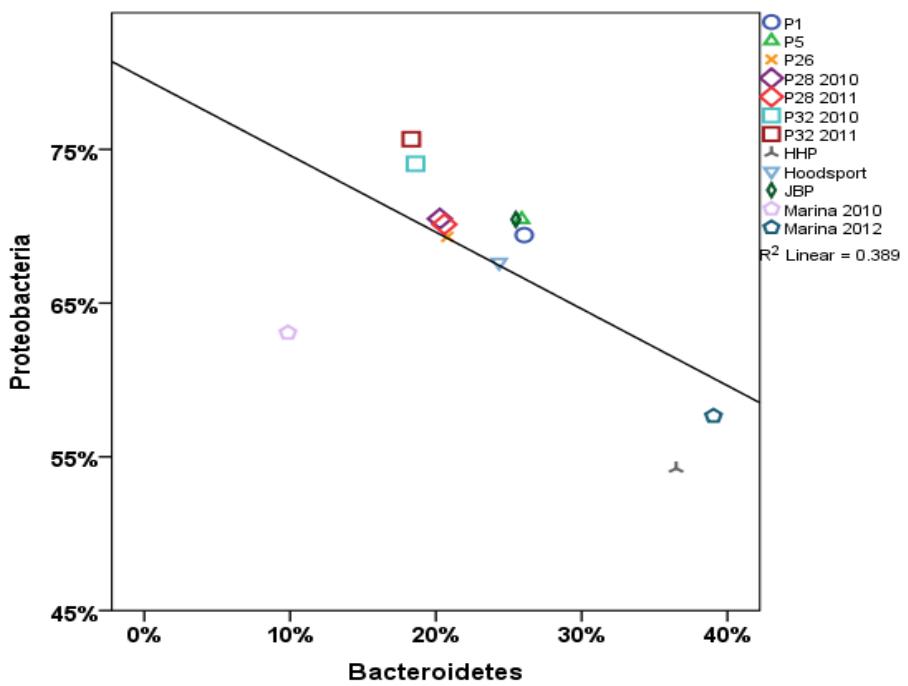

Supplementary Figure 10. Relationship between the relative abundance of Proteobacteria and Salinity. A statistically significant positive correlation was observed between the relative abundances of Proteobacteria and Salinity in a. all Puget Sound samples not including WWTP effluents and b. All Puget Sound samples including WWTP effluents.

Supplementary Figure 11. Bacteroidetes Abundance versus Temperature. Relationship between the relative abundance of Bacteroidetes and Temperature. A statistically significant positive correlation was observed between the relative abundances of Bacteroidetes and Temperature in all Puget Sound samples not including WWTP effluents.

Supplementary Figure 12. Firmicutes Abundance versus Temperature. Relationship between the relative abundance of Firmicutes and Temperature. A statistically significant negative correlation was observed between the relative abundances of Firmicutes and Temperature in all Puget Sound samples not including WWTP effluents.

Supplementary Figure 13. Proteobacteria Abundance versus Bacteroidetes Abundance. A statistically significant negative correlation was observed between the relative abundances of Proteobacteria and Bacteroidetes in all Puget Sound samples not including WWTP effluents.
