October 2001

THIS PAPER MAY BE CITED IN THE FOLLOWING MANNER:
ABSTRACT

Information on high seas recoveries of coded-wire tagged (CWT) salmonids has been reported annually to the International North Pacific Fisheries Commission (1981-1992) and to the North Pacific Anadromous Fish Commission (1993-present). In this document, release and recovery data for 445 CWT salmonids are reported for the first time. Reported recoveries are from U.S. commercial groundfish (trawl) fishery operations (419 recoveries) in 1996-2001 and U.S. and Japanese high seas research vessel operations (26 recoveries) in 1998-2000. The results were compared to previous CWT and high seas tag (HST) recoveries, and significant new information on ocean distribution of Pacific salmon and steelhead is discussed. Two recoveries of Yukon River hatchery chinook salmon corroborate information from seven previous recoveries showing that Yukon Territory chinook salmon are distributed in the southeastern Bering Sea in winter (December-March). One recovery in March at 52°56’N, 156°48’W is a southern range extension for British Columbia chinook salmon in the western Gulf of Alaska. Nine recoveries of Idaho (8) and Oregon (1) hatchery chinook salmon from the Snake River Basin provide new information (only 3 previous recoveries) on their distribution off the Washington Coast. Two recoveries at 58°42’N, 150°35’W and 59°42’N, 149°22’W are westward extensions of the known ocean range of juvenile (ocean age-.0) Oregon chinook salmon in the coastal Gulf of Alaska. A recovery at 56°11’N, 166°21’W is a northwestern range extension for southeastern Alaska chum salmon in the Bering Sea (only two previous recoveries). A coho salmon released in Grays Harbor (Satsop River), Washington, and recovered in the central Gulf of Alaska at 54°N, 145°W in July is a significant extension of the known high seas (international waters) range of maturing U.S. West Coast coho salmon. Previous CWT and high seas tag recoveries of Washington coho salmon in international waters were all south of 48°N. Two recoveries at 58°22’N, 150°16’W and 59°17’N, 148°55’W are western range extensions for juvenile (ocean age-.0) southeastern Alaska coho salmon in the coastal Gulf of Alaska. Four CWT recoveries (59°00’N, 150°49’W; 58°51’N, 150°42’W; 58°32’N, 150°25’W; and 59°17’N, 148°55’W) are western range extensions for juvenile Washington coho salmon in the coastal Gulf of Alaska. An inland summer run hatchery steelhead from the Snake River Basin, Oregon was recovered in the central Gulf of Alaska (47°59’N, 145°W) in mid July. Although this recovery location is well within the known ocean range of Snake River Basin steelhead, it is the southernmost recovery of this stock along 145°W longitude, which is currently the only survey line for high seas recovery of CWT salmonids across this vast region of the North Pacific Ocean.
INTRODUCTION

The North Pacific Anadromous Fish Commission (NPAFC) coordinates the examination of high seas commercial and research catches for salmonids that might contain a coded-wire tag (CWT). Recoveries of coded-wire tagged salmonids in the North Pacific Ocean and Bering Sea have been reported annually to the International North Pacific Fisheries Commission (Dahlberg 1981-1982; Wertheimer and Dahlberg 1983-1984; Dahlberg and Fowler 1985; Dahlberg et al. 1986-1992; Margolis 1985; Margolis et al. 1989; McKinnell et al. 1991) and to the North Pacific Anadromous Fish Commission (Dahlberg et al. 1993-97, Myers et al. 1998-2000). The Regional Mark Processing Center, Pacific States Marine Fisheries Commission, incorporates the high seas CWT recovery data into their coastwide, on-line CWT recovery data set (Regional Mark Information System (RMIS), http://www.rmis.org/index.html). In this document, we list previously unreported data for CWT salmonids recovered aboard commercial groundfish vessels in the U.S. Exclusive Economic Zone (1996-2001) and U.S. and Japanese salmon research vessels in the North Pacific Ocean (1998-2000). The results were compared to previous CWT and high seas tag (HST) recoveries, and significant new information on ocean distribution and migration patterns of salmon and steelhead (Oncorhynchus spp.) is presented.

RESULTS AND DISCUSSION

Data for 419 CWT salmon recovered in incidental salmon catches by the U.S. commercial groundfish (trawl) fishery in the U.S. Exclusive Economic Zone in 1996-2000 are listed by species (414 chinook, 1 chum, and 4 coho salmon), recovery region (Bering Sea, Gulf of Alaska, U.S. West Coast), and release location (state, region, and basin) in Table 1. The latitude and longitude of recovery for 15 CWT chinook salmon recovered in the Gulf of Alaska could not be determined from the data recorded by fishery observers; therefore, the recovery locations for these fish appear as National Marine Fisheries Service (NMFS) statistical areas. Area 610 (4 recoveries) is in the western Gulf of Alaska (158°W–170°W) and Area 630 (11 recoveries) is in the central Gulf of Alaska (146°W–153°W). Data for 26 CWT salmonids recovered during U.S. and Japanese salmon research vessel operations in 1998-2000 (4 chinook, 21 coho, and 1 steelhead) are listed in Table 2.

U.S. scientists periodically prepare reports and maps for NPAFC based on historical high-seas salmonid tag recoveries, which describe the known ocean ranges of major regional stocks of Asian and North American salmonids (for example, Myers et al. 1996). The sections that follow are a review by species of significant new information pertaining to ocean distribution and migration patterns of salmonids.

Chinook salmon

Two recoveries of Yukon Territory hatchery chinook salmon corroborate previous information on the winter (March) distribution of Yukon River chinook salmon in the eastern Bering Sea (Fig. 1). One recovery in March at 52°56’N, 156°48’W is a southern range extension for British Columbia chinook salmon in the offshore waters of the
western Gulf of Alaska (Fig. 2). Eight recoveries of Idaho hatchery chinook salmon and one recovery of an Oregon hatchery chinook salmon from the Snake River Basin provide substantial new information on their distribution off the Washington Coast (Fig. 3). Two recoveries are westward extensions of the known ocean range of juvenile (ocean age-0) Oregon chinook salmon in the coastal Gulf of Alaska (Fig. 4).

Chum salmon
A hatchery summer-run chum salmon (Neets Bay stock) released in Nakat Inlet, Alaska, in 1998 and recovered in late September 2000 in the southeastern Bering Sea at 56°N, 166°W is a slight northwestern range extension for southeastern Alaska chum salmon (Fig. 5; only two previous Bering Sea recoveries of CWT southeastern Alaska chum salmon). There are a total of only 12 other reported recoveries of CWT chum salmon by the U.S. Groundfish Observer Program since 1980, and all of these are Bering Sea recoveries of hatchery chum salmon released in the Stave (6), Puntledge (1), Nimpkish (1), and Chehalis (1) rivers in British Columbia, Finch Creek (1) in Hood Canal, Washington, and Deep Inlet (1) and Kasnyku Bay (1) in southeast Alaska.

Coho salmon
A coho salmon released in Grays Harbor (Satsop River), Washington, and recovered in the central Gulf of Alaska at 54°N, 145°W in July is a significant extension of the known high seas range of maturing U.S. West Coast coho salmon. Previous CWT and HST recoveries of Washington coho salmon in international waters were all south of 48°N (Fig. 6). Two recoveries are western range extensions for juvenile (ocean age-0) southeastern Alaska coho salmon in the coastal Gulf of Alaska (Fig. 7). Four recoveries are western range extensions for juvenile Washington coho salmon in the coastal Gulf of Alaska (Fig. 8).

Steelhead
A steelhead recovered in the central Gulf of Alaska (47°59’N, 145°W) in mid-July, was an inland summer run hatchery fish from the Snake River Basin, Oregon (Fig. 9). Although this recovery location is well within the known ocean range of Snake River Basin steelhead, it is the southernmost recovery of this stock along 145°W longitude, which is currently the only survey line for high seas recovery of CWT salmonids across this vast region of the North Pacific Ocean.

ACKNOWLEDGMENTS
Fishermen, processors, observers, and scientists who participated in the 2001 high-seas CWT recovery program are gratefully acknowledged. The North Pacific Groundfish Observer Program, Alaska Fisheries Science Center (AFSC), NMFS, provided snout samples from salmonids lacking the adipose fin and recovery data collected by observers from the U.S. groundfish fishery. Eric Reiter, Auke Bay Laboratory (ABL), NMFS, dissected salmon snouts, read tags, and coded data. Jerry Berger, AFSC, provided data on catch locations, when observer data accompanying the samples were incomplete or erroneous. The Fisheries Agency of Japan and
Hokkaido University provided salmonid head samples and accompanying biological and catch data from Japanese salmon research vessels. Robert Walker and Nancy Davis, School of Aquatic and Fishery Sciences, University of Washington, participated in Japanese salmon research vessel recoveries of CWT salmonids. ABL provided funding for compilation and reporting of CWT release and recovery data (NOAA contract No. 50ABNF-1-0002).

Recoveries of CWT Yukon Territory Chinook Salmon

- New Recoveries (n = 2)
- Old Recoveries (n = 7)

![Map of CWT recoveries in the eastern Bering Sea](image)

Fig. 1. Recovery locations of coded-wire tagged (CWT) Yukon River (Yukon Territory) hatchery chinook salmon in the eastern Bering Sea. The numbers inside the open and closed symbols indicate the month of recovery. These CWT recoveries provide the only direct information on the distribution of Yukon River chinook salmon in the eastern Bering Sea.
Fig. 2. Coded-wire tag (CWT) recovery locations of British Columbia chinook salmon in the Gulf of Alaska (1980-present). The numbers indicate the month of recovery. The open diamond indicates a recovery at 52°56’N, 156°48’W that is a southern range extension for British Columbia chinook salmon in the western Gulf of Alaska.
Oregon (O) and Idaho (I) Snake R. Basin Chinook Salmon

Fig. 3. Coded-wire tag (CWT) recovery locations of Oregon (O) and Idaho (I) Snake River Basin chinook salmon off the coasts of Washington and Oregon. New recoveries shown include 2 Oregon and 8 Idaho hatchery fish. Previously reported recovery locations are indicated by the open diamonds (1 Oregon and 2 Idaho fish).
Fig. 4. Coded-wire tag (CWT) recovery and high seas tag (HST) release locations of juvenile (ocean age-.0) Oregon chinook salmon in the Gulf of Alaska. The numbers indicate the month of recovery or release. The open diamonds indicate two new recoveries at 58°42’N, 150°35’W and 59°42’N, 149°22’W that are western range extensions for juvenile Oregon chinook salmon in the coastal Gulf of Alaska.
Recoveries of CWT Southeastern Alaska Chum Salmon

- New Recovery (n = 1)
- Previous Recoveries (n = 2)

Fig. 5. Recovery locations of coded-wire tagged (CWT) southeastern Alaska chum salmon in the Bering Sea. The numbers indicate the month of recovery. A new recovery at 56°11’N, 166°21’W is a northwestern range extension for southeastern Alaska chum salmon in the Bering Sea.
Fig. 6. Coded-wire tag (CWT) recovery and high seas tag (HST) release locations of Washington coho salmon in the North Pacific Ocean. The numbers indicate the month of CWT recovery or HST release. The open diamond indicates a new recovery at 54°N, 145°W that is a significant range extension for maturing U.S. West Coast coho salmon in the international waters of the central Gulf of Alaska.
Fig. 7. Coded-wire tag (CWT) recovery and high seas tag (HST) release locations of juvenile (ocean age-.0) southeastern Alaska coho salmon in the Gulf of Alaska. The numbers indicate the month of CWT recovery or HST release. The open diamonds indicate two new recoveries at 58°22’N, 150°16’W and 59°17’N, 148°55’W that are western range extensions for juvenile southeastern Alaska coho salmon in the coastal Gulf of Alaska.
Fig. 8. Coded-wire tag (CWT) recovery and high seas tag (HST) release locations of juvenile (ocean age-.0) Washington coho salmon in the Gulf of Alaska. The numbers indicate the month of CWT recovery or HST release. The open diamonds indicate four new CWT recoveries (59°00’N, 150°49’W; 58°51’N, 150°42’W; 58°32’N, 150°25’W; and 59°17’N, 148°55’W) that are western range extensions for juvenile Washington coho salmon in the coastal Gulf of Alaska.
Fig. 9. Recovery locations of coded-wire tagged (CWT) Snake River Basin steelhead in the North Pacific Ocean. The numbers indicate the month of recovery. The open diamond shows the location of the only new high seas recovery of a CWT steelhead reported in this document. This is the southernmost recovery of this stock along 145°W longitude, which is currently the only survey line for high seas recovery of CWT salmonids in this vast region of the North Pacific Ocean.
