ii) Some typical Hanford Applications 1976 through 1982

iii) Pending and on-going Hanford evaluations for 1983.

- Status of present subsurface hydrologic analysis capability applied to the Hanford Project.

- Specific recommendations.

The presentation provides a historical prospective of the status of hydrologic assessment capability for the Hanford unconfined ground water system. It presents a recommendation for the conduct of a hydrologic planning study to provide Hanford with a master plan by which to angment present technology, develop new technology, and maintain a state-of-the-art assessment capability.
