Data Switch

The new IS4000 data switch was installed in September to provide selected access to computer systems. You may access the switch by dialing 6374 (IBX) or 375-2900 (outside the IBX system). You may use any speed up to 9600 bps unless otherwise limited by a multiplexer, dial-up modem, or host computer.

To connect your terminal to the switch, type two carriage returns about one second apart. The first makes the connection and the second allows the switch to sense your baud rate.

When you connect with the switch it will prompt:

DESTINATION?

You will then enter one of the following three- or four-character addresses, followed by a carriage return: (the switch accepts upper or lower case and any parity)

BVX Battelle-Northwest VAX
BCL Battelle-Columbus CYBER
AVX ALDS VAX
UNI RL UNIVAC
LA12 Los Alamos (1200 bps)
WLR GRED 11/70
ZVX AEGIS VAX

The switch will respond with

PAUSE

After which you will enter a series of carriage returns (or <CNTL C> for the PDP 11/70) until the login prompt of the selected system appears.

Telephone Numbers

Manager, Information Systems Department
John Fox, 375-2683

Internal Computer Systems

System Managers

Dennis Friedrichs	376-8628
	547-7190 (home)
Jerry Johnson	375-2097
