Subject Funding for Geophysical Log Interpretation

To get work started again on the Geophysical Log Interpretation Task, I have written you a work order (B40933) for $6,000. Based on your cost estimates for various tasks we've discussed, I've decided that I'd like for you to use this money to complete the tasks listed below.

1. Develop the capability to output data from the system to the CALCOMP plotter.

2. Develop the capability to keep a file documenting any editorial changes that are made. We may also want to put some kind of controls on the system to prevent editing except by authorized individuals.

Any money that is left after these tasks have been completed should be used to digitize more logs.

At this time, we cannot supply the additional funding needed for the ALDS work and the other tasks you've identified. However, I am tentatively planning to supplement your work order later in the year (perhaps sometime this spring). At that time, you and I can discuss what work should be done with the additional funding.
