Subject COMMENDATION OF J. T. RIEGER

I would like to commend Joanne on her work since she joined the Hanford Ground-Water Surveillance Program. It is only due to her concentrated efforts that we have been able to straighten out many misconceptions (since years back) relating to contaminant analysis reports and storage of the data in the computer data base (CIRMIS). She developed a sufficient understanding of analytical laboratory techniques and their current reporting practices to supply the information we require for data base improvement. Quality control of the CIRMIS data base and the entire program will be more efficient because of her efforts.
