Subject AUGUST MONTHLY REPORT

Data Base Maintenance

The August update of the contaminant data with June and July 1981 data entries was made, with only a slight delay caused by the move.

The well structures portion of the CIRMIS Data Base was initiated in 1974 by a massive key punch effort. Five card types are involved. Very little has been done with the data to verify or check. Upon close inspection, many errors were detected. A program was written to identify and list these errors. The complete data file was checked and all errors for Card Type 1 were corrected. All errors identified on Card Type 2 were listed and sent to P. A. Eddy, Occupational and Environmental Protection, for correction. Card Types 3 and 4 were corrected. Card Type 5 needed no corrections.

When the 11/70 computor was moved to Sigma V Building from the Math Building, one disk unit was elimated from the system. The CIRMIS programs which used the designation of DB3: have been updated to read and write to DB2:
