Monthly Report

Subject

Water level readings from taping the wells in July and December were recently received and used to update the hydrograph portion of the data base.

Contamination records received during March were processed into the data base along with late arriving results from February and January.

Historial contamination plots for 14 wells were plotted at the request of O&EP.

A program, CTM300, which will plot historical contamination and water quality to the Techtronics terminal in the 300 area has been completed and tested.
