a meeting with Mike Graham of Rockwell Hydrology group on November 13, disclosed that Rockwell will be drilling, perforating and testing on an East-West line through the 200 area. We have gotten together all the records of well (aquifer) tests they have on file and will get together with Rockwell to evaluate available historical data and coordinate future testing with the resources available. A meeting with Rockwell, Dave McShan and Andy Reisenauer will occur sometime in the middle of December.

Work continues to obtain a computer system for the surface and ground water evaluation groups.
