Subject MONTHLY REPORT - SEPTEMBER 1982

My activities and accomplishments during the month of September are summarized below.

- I finished making revisions to the summary report of ground-water monitoring practices at DOE sites. Twenty-four of the 42 sites included in the report chose to submit comments on the draft; I have incorporated these comments. The report has been retyped as needed and is now ready to go through clearance.

- A set of slides showing the areal extent of tritium in the ground water for each year from 1961 to 1981 has been completed. Graphics did a beautiful job on these slides, and I am quite pleased with the results. These slides will be available for future presentations on ground-water surveillance at Hanford.

- Paul Eddy and I have been preparing the presentation that I will give at the annual meeting of the Geological Society of America on October 20. This paper is entitled "Radionuclides in the Ground Water at the Hanford Site in South-Central Washington: A Case History."

- On September 22, Chuck Cline gave me his cost runs and briefed me on the status of the work orders that he has been tracking. Although I don't have much time to get up to speed before the end of this fiscal year, I will try to ensure that the transition to FY-1983 is a smooth one.
