Subject Monthly Report - July 1982

The first part of the month I spent studying resistivity techniques and interpretation of resistivity data. In mid-July, I attended a week-long course on ground-water pollution and hydrology in Princeton, New Jersey. This was an introductory course touching on subjects such as computer modeling and case studies of ground-water contamination. The remainder of my time this month was spent on preparations for installing a water-level recorder on Well 699-45-4 near the Hanford Townsite.
