Subject Monthly Report - June 1982

Bank Storage

I have investigated both the Stevens Manometer-Servo Water Level Sensor and the Bailey Scientific Sonic Water Level Recorder for possible use as a river level recorder. As it stands now, the sonic recorder is no longer in production, and the manometer-servo, at about $3000, is too expensive. Therefore, I will continue attempting to work out a setup using pressure transducers.

Aquifer Testing

I assisted Leigh Prater in setting up for, and conducting a test for Westinghouse on a well at the FFTF Site.

Resistivity

Leigh Prater and I are experimenting with the operation of this equipment in preparation for conducting subsurface investigations.

Miscellaneous

I assisted Dave McCormack with some structural calculations in relation to a project of his.
