- VTT Model Update

  Disposal/Withdrawal Data Base - The 1968-1980 portion of the disposal/withdrawal data base has been completed and the files prepared for the VTT model reverification runs. Some of the d/w programs have been modified for easier use. The chapter of the final report dealing with d/w is being prepared.

  The data on the estimates for disposal/withdrawals through the year 2000 has continued. The various contractors are cooperating in providing data and estimates.

  Update of Transmissivity and Aquifer Bottom Distributions - Data on aquifer pump tests and new wells (i.e., well logs) since 1972 have been gathered from a variety of sources. The pump test data obtained thus far has been analyzed and the results have been compared to existing data by plotting the new transmissivity data on the current VTT transmissivity contours. A table is also being prepared which indicates the current VTT model value in the area, the new value, and a comment section indicating the quality of the comparison. Phil Oberlander and Ron Schalla have provided Tony Zimmerman some valuable consultation in well log interpretation and pump test analysis.

DOE Credit Card Calls

Nothing to report.
