MONTHLY REPORT
JULY, 1981 J.S. WILDUR

1. Escorted Noble and Robinsons personnel around the Hanford Site for their field survey review. The sampling team was also helped out on a couple of the sample wells which were hard to get to. The sampling was completed in four days. Samples are to be sent to a lab in Seattle.

2. Two new 5 watt generators arrived from stores. These were then sent to the shops to be wired up with batteries and electrical starts. They are in use by the summer help at this time.

3. A one-week Geo-Eco Class was completed.

4. The Hanford Well Location Handbook was completed and handed out.

5. The 300 Area ground-water net has caught the eye of Westinghouse Engineers working on the FMIT project. They are interested in the fluctuations of the ground-water table underneath the FMIT Site in the 300 Area. Westinghouse is willing to pay for the recording and interpretation of hydrograph data.
