PNL report A catalog of Borehole Geophysics on the Hanford Site, 1958 to 1980, (PNL-3504) was printed and circulated.

Work continued on program LOGHDR. This program has been used to initiate a data base of digitized well logs. The display and analysis sections of the programs are still under development.

- Data Base Maintenance

Water level readings from taping the wells in July and December were recently received and used to update the hydrograph portion of the data base.

Contamination records received during March were processed into the data base along with late arriving results from February and January.

Historical contamination plots for 14 wells were plotted at the request of O&EP.

A program, CTM300, which will plot historical contamination and water quality to the Techtronics terminal in the 300 Area has been completed and tested.

DOE Credit Card Calls

Nothing to report.
