Subject Task 08 Reports

During my meeting with John Mathur at DOE Headquarters, I said that I would try to complete revision of the "Guidelines" document and the "Monitoring" document by the end of August. However, it now is apparent that the documents will not be completed before the end of September. The Guidelines document probably will have to be recleared because of the substantial changes and addition of graphic material requested by John. I thought that the Monitoring document previously had been cleared, but that is not the case, and the document will have to go through the clearance procedure after revision.

Also, some of my time has been diverted in addressing and accidental release of perchloroethlyene to the ground in the 300 Area. This has delayed work on the documents.
