Richland, WA 99352

Dear Mr. Boynton:

REVIEW OF "GROUND-WATER MONITORING FOR HAZARDOUS-RADIOACTIVE MIXED WASTES" BY ROCKWELL

As a result of Order 5480.2 being implemented, Al Law and I have been working closely to assure that the Hanford Site complies with the Order. Al has done a very good job on reviewing Rockwell operations and developing a plan of what would allow the operations that relate to hazardous waste to comply. The document which has been developed illustrates what is needed in the extreme case in order to comply with 5480.2. These costs will probably reduce as we learn more about the methodology for sampling for organics and various inorganics.

I have reviewed the document several time and as a result feel that it is a very acceptable plan. If DOE-RL expects monitoring of specific waste sites, this plan will put Rockwell in compliance with the monitoring of ground water as described in the Order 5480.2 and it's relationship to 40CFR 260-265.

I appreciate Rockwell allowing me to review the document and if I can be of further service, feel free to contact me at any time.

Very truly yours,

Paul A Eddy
