Subj: Monitoring Data - Unconfined Aquifer

George: As we discussed yesterday, Phil Rogers wants to obtain the recent well-water level data for pass-through to the USGS. We should get this information to him early next week, along with calcomp plots (or copies) of the well location maps. If you have time to generate expanded hydrographs for selected wells, that would be fine also. You shoud indicate by foot-note or otherwise, where we question data accuracy due to lack of elevation control or other unknowns.

I'm going to be out of town until Thursday of next week, and I would appreciate it if you or Tony could get this information to Phil by Tuesday or Wednesday.

Thanks.

Paul - I'm off to P.C. Monday morn. — will be back for duty on Thurs.

John
