Subject Final Disposition of PP&L's Hanford Site Restoration Program

I have finished my "tour-of-duty" as PNL's representative providing onsite overview and inspection of the referenced field work as requested by DOE. Attached to this brief report are copies of work progress sheets and signed task completion agreements between myself and Mr. George Deardorf, the Golder & Associate's field supervisor. He oversaw all site restoration efforts on behalf of Puget Sound Power and Light Company. The progress sheets described in detail the work accomplished by the Golder people. I feel this scope of work followed, as closely as possible, the restoration agreement between DOE and PP&L. Also included as an attachment to this report is a listing of the disposition of the many hundreds of shallow depth "shot holes" that were drilled in accompaniment with the deeper geologic exploration holes.

I am confident that at least 95% of the original holes drilled by PP&L were found and disposed of in one way or another. (Known exceptions are listed in the completion agreements.) I have also retained some well caps to place on casings that might have been inadvertently missed during restoration work.

My thanks to John R. Raymond who filled in for me during a couple of days of vacation. His experience and willing assistance proved to be invaluable.
