Subject Ground-Water Monitoring

In the future, all ground-water samples will be collected unless I indicate that not collecting them will not have an adverse affect on the program. Any wells that are not sampled must be cleared through me or my authorized representative, regardless of scheduling and/or manpower conflict. If there is a problem with scheduling ground-water work and surface sampling, the conflict must be brought to the attention of the group leaders, who will review the conflict and decide the direction of action.

PAE:gd

Paul,

I think that we should sit down and discuss this and work something out ahead of time. The times and problems that arise which may force a decision as to what samples to collect do not lend themselves to stopping, getting the group leaders together and working out the direction of action (ie, It's 6:30 am and only 2 monitors make it in to work — what to do!!??) There shouldn't be any problem — but it should be discussed and worked out ahead of time!
