Battelle

total cost of construction is estimated to be around $6,000. The driller's work will be supervised by E. L. Hilty of our staff to ensure that proper techniques and materials are used in the construction of this well.

Although contamination of the drilling equipment is not expected to be a serious problem in this case, it is our understanding that UNC will assume responsibility for decontaminating or, if necessary, purchasing any equipment that becomes contaminated during this effort.

Please let me know if I can provide any more information on our plans for this well.

Sincerely,

Leigh S. Prater
