Subject Monthly Report - September 1984

Literature review has been completed for Jack Corley's work order pertaining to the history of Environmental Surveillance at Hanford. I listed the files available in 318TR3, while others have completed listings of documents and data available elsewhere.

Money to conduct the study for Rockwell in the 200-E Area may be available at the present time; however, this is an on-again/off-again situation. The proposed study would entail drilling and sampling organics in the unsaturated (vadose) zone around the B-62 crib, as well as sampling at various levels within the saturated zone, beneath the water table. The portion of the study that will be funded, if not all, is still undecided.

Writing continues on the BWIP interval reports. Approximately $45,000 will be available to continue writing in the next fiscal year. This month two reports were completed and another is being written on the McCoy Canyon Flow Top at McGee borehole.
