Subject Monthly Report - June 1984

Summary

Results from routine sampling on and off the Hanford Site showed no appreciable changes from previous results. Penetrating dose measurements were normal at all locations.

Routine Operations

The offsite annual report was printed and distributed. An informal discussion of environmental surveillance results as covered in the report for 1983 was held for DOE and PNL managers and PNL press relations personnel. A press briefing also was held for local media coverage. Several out-of-town telephone inquiries were answered regarding information presented in the annual report. DOE approval was received to give the report wide distribution.

The U.S. Testing Statement of Work (SOW) was reviewed and discussed at a meeting with the PNL liaison and U.S. Testing personnel. The FY 1985 SOW represents an improvement over last year due to improved language to remove ambiguities. U.S. Testing's overall performance during FY 1984 has been satisfactory with respect to processing environmental samples.

Program Management

The onsite surveillance report for 1983 (PNL-5039) was completed in draft form. Submittal to DOE for clearance is expected around July 1.

K. R. Price attended "Hazardous Waste Regulations" and "Environmental Audits" courses presented by Government Institutes, Inc. in Los Angeles, California.
