Subject Monthly Report - January 1984

Geophysical Logging

Six piezometers were installed in well DC-19C. Each piezometer is gravel packed and cemented. After each cementing the temperature probe was run to determine where the cement set.

The QA logs which are run every three months in 5-2 were completed.

The natural gamma, neutron and density probes were run in well PSP&L #5 for Dave Myers on January 24, 1984.

Other Activities

Joe Stephan and I are updating the Hanford Site well location map. Using aerial photographs of the site taken at 65,000 feet, we are outlining all roads and wells.

On January 11, 1984, I checked Stevens recorders for Rockwell at 20 well sites with Scott Wilcox.
