Subject Monthly Report - April 1984

Several tasks were completed during the month of April. The "Nitrate Concentration in the Unconfined Ground Water" map was completed and sent to graphics. The Nitrate text was also finished and submitted to P. A. Eddy. All figures, graphs, etc. are expected back from graphics this week.

A fence diagram and cross section of the area surrounding 1325-N crib were constructed at the request of L. S. Prater. All aquifer testing equipment has been removed from N Area and returned to the Met Tower. There was 2200 ft of discharge line rolled up and returned to its rightful owners.

I attended meetings with representatives from Meier Associates and Westinghouse to discuss the renovation of well 699-S1-7B. The well is presently on the PNL sampling schedule. Westinghouse expressed the need to convert S1-7B into a drinking water source well. After a review of costs to renovate S1-7B, Westinghouse realized the advantages of drilling a new well properly designed to suit their needs.

I attended a propane fuel training course held in the 1100 Area.

The Stevens Recorders were permanently removed from the Hanford Townsite wells: 699-48-7, 45-4, 43-3, 39-1, 39-E3. E. L. Hilty and M. R. Quarders have both been notified.

I spent the first week of April skiing in Utah.
