Subject Monthly Report - April 1984

This month all of my time has been devoted to collecting sub-surface samples at 5-foot intervals at 11 wells near the 1325-N crib. One monitoring well and ten sampling wells were drilled by Ponderosa Drilling Company using an air-rotary drilling rig. In addition to collecting and describing the samples, I also learned quite a bit about air-rotary drilling and about business contracts. The monitoring well, N-35, was completed on April 6, and the sampling wells, N-36 through N-45, were completed by April 25. Currently I am re-examining the samples and comparing them to each other to determine the zones with possible low permeability rates.
