Subject Monthly Report - January 1984

During the month of January, I attended a Water Well Hydraulics short course held at the University of Wisconsin in Madison. The course covered basic methods of determining aquifer characteristics and analyzing well flows based on the hydrogeology and well hydraulics.

More specific topics included: Darcy's law, fundamental flow equations, leaky aquifers, pumping test analysis, and laboratory demonstrations. The class was very thorough in both the theoretical and practical aspects of well hydraulics.

Analysis of aquifer test on well 699-2-3 has been completed. A copy of the data was sent to Andy Reisenauer of GR&E for his use and reference.

I spent 10 days on vacation visiting my grandparents in upper Michigan.
