Subject Monthly Report - January 1984

I have been informed that the special pumps for the organics task have been ordered. They are expected to arrive sometime in February. I am currently working on the task plan for the organics task.

Karen Oster and I watched the divers reinstall the river level recorder in the river near the Hanford townsite. Everything went smoothly and, judging by data received, it appears the unit is working properly.

Chris Newbill is apparently working on straightening out some anomalies in our data base. He called on me for some help in tracking down certain data. With Peggy Blumer's assistance, I was able to provide him with the information he needed.

P. A. Eddy has asked me to write a purchase requisition for an outside firm to collect and analyze samples from approximately 20 wells. This was done once before about five years ago. It will serve as another check on our program, similar to the USGS contract, and will give us a chance to have a few organics samples done in the process.
