Subject Monthly Report - February 1984

This month I finished the first draft of the DC-15 Levey Interbed Report and it has been sent out for review. I completed many of the figures for the McGee well interval reports and they are ready for graphics and photography to reproduce. Currently, I am digitizing the geophysical logs for the McGee well, in order to create a computerized graph containing all of the logs. This figure will be included in all of the McGee well interval reports.

Quite a bit of my time this month was spent updating and correcting the Hanford Well Location Handbook. While working on this project, I discovered that the Hanford wells listing and the Master Sampling Schedule do not always agree with each other. Sometimes it was difficult to find out which list of locations and EMA numbers was actually correct. Later I will check the directions and maps and make corrections for the wells that have not been previously located.

I have also continued to change the charts on the Stevens well recorders for J. T. Rieger, and I went with her to retrieve the river level transducer.
