Subject Monthly Report - January 1984

The installation of piezometer nests at DC-19, DC-20 and DC-22 has been the major priority here at Rockwell. I have been conducting hydrologic tests of the zones where the piezometers will be installed and during the next month I will be involved in the construction.

My interval report on the Rocky Coulee flow interior at DC-4 has been signed off and should be issued soon. Also, the report on the effects of drilling fluid at DB-2 is currently out for peer review. Work on other interval reports is proceeding.
