Subject Monthly Report - January 1984

This month the majority of my time has been spent putting the finishing touches on the Levey interbed interval report. The proofreading and compiling of figures has been finished except for one last table that is still lacking some information. I have been helping C. S. Cline in completing some of his proofreading of the text and drawing up the figures for graphics to reproduce.

I have also been continuing to change the charts on the Stevens well recorders for J. T. Rieger on Wednesdays. Also I will remove the recorders so the monitors can take water samples, and then go back and replace the recorders afterwards. This will cause me to miss the safety films which have been rescheduled to January 25, 1984.

J. T. Rieger and I missed the first set of safety films on January 12, 1984 because we were watching the divers replace the river level transducer. According to the data recorded for the first week after replacement, the transducer appears to be working correctly.
