I finished preparing a chapter for J. R. Raymond's report on guidelines for ground-water protection at DOE sites. The subject of my chapter was potential sources of ground-water pollution, and it included three main sections: types of wastes, methods of disposal, and evaluation of the potential for ground-water pollution at a site.

The SCREEN program, which is designed to flag unusual analytical results as they are entered into our data base, has been modified to handle data that appear as zero or negative values.

Work on the interval reports for Rockwell is progressing satisfactorily. Our main problem right now is getting Rockwell to respond; they are apparently very busy setting piezometers and don't have much time to review our reports and/or supply us with information that we need.

In P. A. Eddy's absence, I prepared and presented the quarterly review for DOE.

In early January, I took vacation time and visited Washington, DC, and Atlanta, Georgia.
