Subject Monthly Report - October 1983

Duck samples were not collected from U Pond in 200 W Area. Collected 1 duck from 300 trenches, 20 ducks from Gable Pond, and 4 ducks from B Pond.

The Game Department was contacted and has agreed to collect some off-site pheasants for us. They should have them by the end of October.

The Riverview beef sample will be late getting collected because no meat will be available until November.

The waste sites were not surveyed this month.

As of this date, the railroad survey has not been completed.

A Radiation Protection Technologist was borrowed from Joe Berry for one day to help catch up on road monitoring. Weekly road monitoring trips for 10/10/83 and 10/14/83 were overlooked but have since been completed.

RL Dirkes and I contacted the chief at the central fire station in regards to a new location for the existing air sampler. An electrician will install the plug for us.

The noble gas sampler at Ringold Met Tower was replaced. Twice this month completed samples were collected from the new noble gas sampler systems.

WL Bresina was contacted about doing a longer run in on the air sample pumps.

The new submersible pump was installed at Richland pumphouse.

Pumps were installed in the eight new wells at 100 N and the three new wells at 100 H. The new wells have been added to the routine schedule. The 699 wells were all sampled with few problems encountered. The following wells were not sampled for various reasons:

R299 E13-20	obstruction in well
R299 E16-2	obstruction in well
R299 E24-4	broken pipe in well, pumps back
R299 E25-9	obstruction in well
699 17-70	unable to get to because of tumbleweeds
