Subject Monthly Report - October 1983

My first two weeks here have been spent getting oriented to the type of work done by the Environmental Evaluations Section. I have spent about half my time in the field. There, I have learned how to use an E-tape to measure depth to water, as well as how to change the weekly charts on the Stevens recorders. In the office, I have been graphing data obtained by the In-Situ transducer which measures change in river level. I have begun compiling a series of charts from a Battelle Analytical Report dated December 9, 1956 to February 9, 1961. I am organizing the data by well number and date, listing quantities of certain isotopes found in well samples.
