Subject Monthly Report - October 1983

The new water level recorder from In-Situ arrived early in the month and was installed in the river by TL Liikala, Dale Washburn, and myself. So far there have been no problems with its operation. Even though the data must be retrieved in the field and manually recorded with this unit, I feel confident that improved reliability and data quality will more than outweigh this small inconvenience.

At a request from LS Prater, I have written a work order to Kaiser Engineering to survey the eight new wells in the 100-N Area. This work should be done by the end of October.

We received a request from Rockwell to collect a water sample from well 399-8-4 to be analyzed for the presence of organics. I arranged for sample collection and analysis and the results of analysis have been given to Vern Johnson of Rockwell.

At the end of October, I assisted TL Liikala with an aquifer test on well 699-2-3.

Also this month, I spent some time preparing slides and putting the final touches on my talk for the GSA meeting in November. I presented the talk to a meeting of the Association of Women Geoscientists where it seemed to be well received.
