Subject Monthly Report - November 1983

During the month of November, most of Dale's time has been devoted to compiling contaminate data from a Battelle Analytical Report. After reviewing his progress, I suggested that he graph some of his results, (i.e., gross beta, 1956-1961) in order to get visual feel for some of the numbers. I also suggested he contact Pam Mitchell via Miss Rieger about entering some of his data into the computer. Evidently, his data needs to be reorganized into the proper format before any computer work can begin.

Dale attended a demonstration of the CIRMIS system at Sigma V.

Dale and I spent one day measuring D/W in eight N Area wells.

Dale and I spent one day locating proposed PSP&L well sites.

JT Rieger will be monitoring Dale's progress for the month of December as GR&E and BWIP commitments will not afford me the time to do so.
