Subject Monthly Report - November 1983

This month I have worked almost exclusively on reorganizing the contamination data from the Battelle Analytical Report dated 12-29-56 to 2-9-61. After completing the data for the first year, the possibility of entering the data directly into a computer was discussed. Before this can be done, however, the entire report must be recopied in a different format.

My other tasks include continued graphing of weekly data obtained by the in-situ transducer. The data shows relative change in the river level upstream from RM-27.

I spent one day in the field with Terry locating well sites to be used for soil tests.
