From BWIP Group PAC FOR CSC & PDT

Subject Monthly Report - November 1983

CS Cline

The interval report describing the hydrologic testing of the Vantage-interbed at the McGee Well has been completed. The report will be sent to PNL for typing, editing and review. The typed copy will be distributed to Bill Price, Steve Strait, and the second author, Bill Pidcoe for review.

Karen Oster has been hired by PNL to aid in reviewing and editing various interval reports for BWIP.

The testing of the Umtanum flow top and sampling of the McCoy Canyon flow top have not been started due to the lack of a work-over rig to set packers. These tests will be conducted ASAP.

PD Thorne

About half my time this month has been spent on writing up the results of the drilling fluid invasion study conducted at borehole DB-2. Hydrologic testing of the Cohassett flow vesicular zone at DC-4 was attempted, but was plagued by equipment problems. I have also been assisting with the hydrologic testing of the piezometer holes (i.e., DC-19, 20 and 22).
