Dear sir,

Sorriry to send you a sudden info.

I'm a Japanese and a researcher of the HP composed by Toshi Hiji, who claims Ufos attack us in October, 1999.

The aliens live in the moon, he says.

As the HP is composed in Japanese, I made a digest in English.

It is completed from NO1 to NO36.

If you are interested in NO23, please let me know.

I'll send other numbers.

Thank you.

NO23 The Attack by Ufos and the Giant Deluge of Noah

-----The mystery of the moon-----

Why does the moon look just the same size with the sun?

The moon is 2,172 miles in diameter and the sun is 870,000 miles in diameter, which means the sun is just four hundred times as large as the moon as if it were measured.

Moreover the distance from the earth to the sun is 9,350 miles and the distance from the earth to the moon is 240,250 miles.

Strange to say, the distance from the earth to the sun is four hundred times as long as that from the earth to the moon.

That's why the moon and the sun becomes the same size in case of the lunar eclise.

Isn't it too strange?

The moon is rotating three hundred eighty-four thousand and four hundred kilometers away from the earth.

But the mass is abnormally big.

It is one eighty-first of the earth.

Why is it abnormal?

The size of the moon is the fifth of the satellites in the solar system.

Do you understand why it is abnormal?

The ratio is too big.

The biggest satellite is Ganimede (the spelling may not correct) of Jupiter.

The second one is Titan of Saturn.

The third is Calist (the spelling may not correct) of the Jupiter.

The fourth is Io (the spelling may not correct).

Even the biggest Ganimede is one thirteen thousandth of the mother planet.

Titan is one four thoudandth of mother planet.

Calist is one seventeen thousandth.

Io is one twenty-two thousandth.

The moon is only one eighty-first.

Strange! Too strange!

The revolution cycle of the moon is twenty-seven days, seven hours forty-three minutes and eleven seconds, which corresponds with the rotation cycle

without

even a second difference.

That's why the moon is always showing the surface to the earth.

The stone which all the Apollo project brought back to the earth is three hundred and eighty-two kilograms.

These stones were delivered to one hundred and forty research institutes.

They were checked by age determination called Calcium-Algon method that is very reliable, which showed many of them is older than four billion and six hundred million years old.

Moreover some of them is over seven billion years old.

Strange to say, two of them were twenty billion years old.

The earth was born four billion six hundred million years ago.

The universe was born fifteen billion years ago according to the Freedman (the spelling may not correct) model.

Why is the two stones older than the universe?

Can you keep looking away from this result?

The stones on the surface of the moon is heavier than the ones on the earth by scores of percentage.

The density of the moon rock was found to be 3.2-3.4.

We know density of the earth rock is 2.7-2.8.

Roughly said, the specific gravity of the moon is heavier than that of the earth.

But the mass calculated from the size of the moon is only sixty percent of that of the earth.

Can you understand the importance of this fact?

The density of the moon's surface is higher.

The mass of the earth, however, is heavier than that of the moon in all.

We know the center of the earth is not especially heavy.

Is it impossible?

No, there is only one solution.

The moon is hollow.

Of course it is impossible the satellite becomes hollow naturally.

There is the observation data of the artificial earthquake done by Apollo 14.

The shock to the moon which is equal to eleven tons of TNT was measured. Seismic wave travel two kilometers at most and the period of traveling is only several seconds in case of the earth.

The seismic wave was observed as long as three hours and twenty minutes in the place one hundred and seventy-three kilometers away in case of the moon.

The view by NASA then was the moon is just like a gong.

You can conclude here that the moon is hollow, however strange considered from the common sense of ours.

The homepage of The Research Report of the End of the Century is as follows.
