Ice storage. In the capital and each of the district towns, in accordance with present regulations, we should allow ice to be stored in each of the garrisons and post-stations* in the provinces (* that is, along ch'alpang station roads). (note: Private storage among the fishing households of the ports and borders and among the p'oja (shop) of the hostels (ch'amjom) will not be prohibited.) (end note)

Indented section: I note that according to present regulations the storage of ice is not allowed outside of each of the district towns. We should allow all the garrisons, post-stations and hostels to store ice so that it would be universally available to officials. Not only that but the common people when sick and travellers thirsty from the summer heat would also be able to obtain it (for drinking).
